- Show error codes...

The **airCloud Home** solution lets you remotely manage the entire range of Hitachi Air/Air heat pumps for residential and small public buildings. A simple and user-friendly application brings real comfort to the end user. Think you forgot to turn off your air-conditioning when you left? Do you want to cool down or heat up a little before you get home? It couldn't be easier, with the **airCloud Home** app!

How does the airCloud Home work?

Connect your air-conditioner to the cloud with your wireless home network.

airCloud adapter

Discrete and easy to install. The airCloud adapter is placed under the indoor unit. It connects to the cloud via your home network.
