HITACHI

OPTING FOR ULTIMATE ENERGY EFFICIENCY

Budget-friendly fitness center Synergym opted for super efficient Hitachi VRF solution to heat and cool their gym, saving energy costs and free of fossil fuels.

SPACE-SAVING COMBINATION OF CENTRIFUGAL & TOP-FLOW VRF

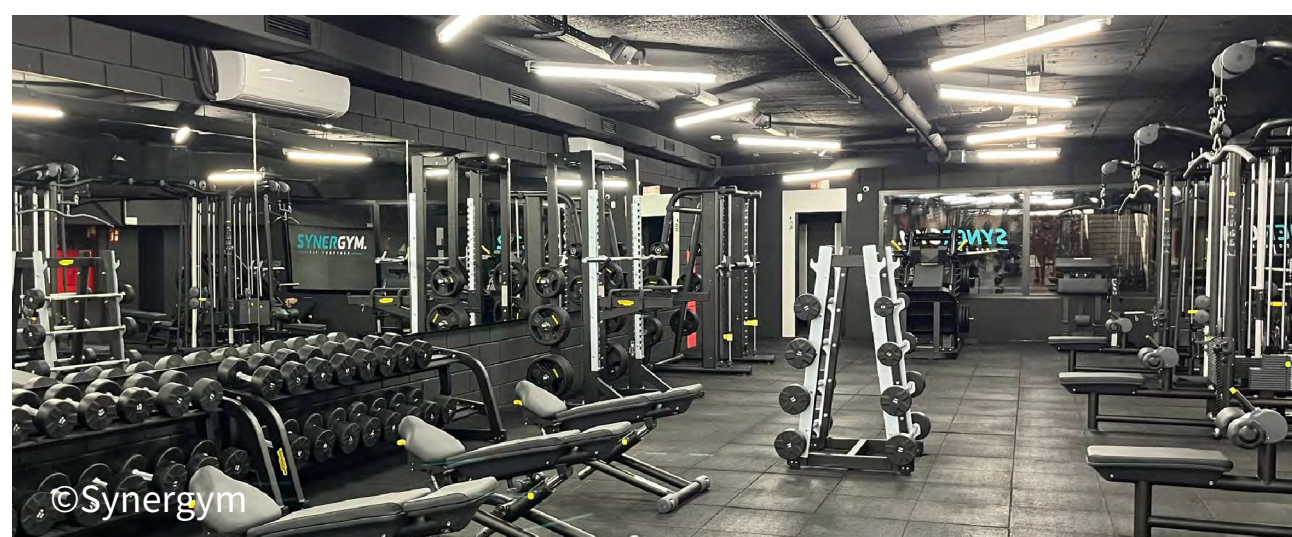

With limited space available on the rooftop, heat recovery SET FREE SIGMA (high efficiency series) was installed for simultaneous cooling & heating. Taking advantage of dropped ceiling at the gym's venue, additional 2 centrifugal VRF units were fitted inside.

INDIVIDUAL ZONE COMFORT

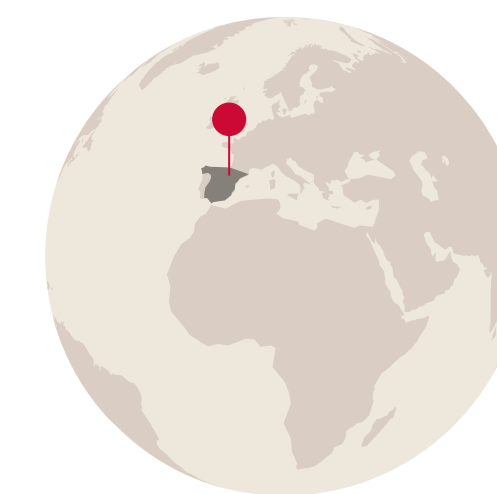

The AC operation can be customized in each room, based on occupancy levels. It's particularly ideal for gyms as the fitness hall usually requires more powerful cooling than other rooms in the venue.

TOTAL CAPACITY: 34HP
